

Everything you asked for. *Reviewed, end to end.*

An independent build review of the Nafaka Smart Vending landing page — what was delivered, how it performs, and where it can go next.

PREPARED FOR
Nafaka Foods Limited

PREPARED BY
97 Design & Digital

DATE
10 September 2026

STATUS
Delivered and live-ready

SECTIONS SHIPPED
10 8 planned, plus 2 added beyond the original scope

One page. One clear job.

Delivered in full.

The Nafaka Smart Vending landing page is live-ready: a single, premium responsive page that positions Nafaka Foods as a managed facility partner and drives one clear action — a free site assessment, requested by WhatsApp. The build matches the approved project plan section-for-section and adds two further sections (an active-spaces showcase and a procurement-style FAQ) beyond the original scope.

Technically, the page is built on clean semantic HTML with no framework overhead, carries full SEO and social-share metadata, and layers its motion and animation on top of an already-complete, fully accessible base — so the experience holds up even if a script or CDN fails to load.

10

Content sections shipped across the page

2

Independent conversion paths to WhatsApp

100%

Responsive from phone through desktop

A credible partner. *Not just a machine supplier.*

The page is written for the person who signs off a placement, not the person who uses the machine: property owners, facility managers, office administrators and institutional leaders. Every section moves that reader from category interest toward one action — requesting a free site assessment — and the enquiry opens directly in WhatsApp, pre-filled with their details, so a qualified lead can be actioned immediately.

CORE POSITIONING

01 Fully managed

Nafaka supplies, installs, stocks, monitors and maintains.

02 Always available

Refreshments remain accessible beyond normal cafeteria hours.

03 Facility-friendly

Minimal space, clear responsibilities and potential revenue.

BUSINESS SNAPSHOT

COMPANY

Nafaka Foods Limited, est. 2016

ADDRESS

Plot 14 York Terrace, Kololo, Kampala

COVERAGE

Uganda, expanding into South Sudan

Ten sections.

One conversion journey.

- 01 **Hero**
Category clarity, premium brand impression and the primary site-visit call to action.
- 02 **The opportunity**
“The easiest amenity your building will ever add” — reframes vending as a building upgrade.
- 03 **Facility outcomes**
Four outcome cards: time saved, tenant comfort, a modern image, and potential property revenue.
- 04 **Service experience**
Payment options, product range and 24/7 access, illustrated with a contactless-payment visual.
- 05 **Operating model**
Side-by-side cards separating what Nafaka runs from what the facility provides.
- 06 **Active spaces**
Beyond the plan — offices, hospitals, universities, banks, airports, factories, government sites.
- 07 **Rollout process**
The four-step journey: assess, agree, install, operate.
- 08 **Company credibility**
Nafaka's food-supply history since 2016, its values and its Ugandan operating record.
- 09 **FAQ**
Beyond the plan — seven procurement-style questions answered before the enquiry is made.
- 10 **Conversion**
Contact details, a structured lead form, and a persistent floating WhatsApp button.

A restrained palette.

Used with confidence.

TYPOGRAPHY

Manrope — interface & headings

Regular, Medium, SemiBold and Bold weights carry every heading, label and paragraph.

Fraunces Italic — the accent voice

Reserved for the one emphasised phrase in every headline, on the site and in this report.

MOTION & INTERACTION

- + Lenis-powered smooth scrolling across the whole page
- + GSAP ScrollTrigger reveals content as it enters view, grouped in batches
- + Magnetic pointer pull on primary buttons for pointer devices
- + An animated count-up on the “10 years” heritage statistic
- + A smooth-height, single-open FAQ accordion
- + Full progressive enhancement — every element is already visible in the base CSS, so a blocked script or slow network never breaks the page

Clean under the hood. *Nothing to slow it down.*

Stack

Static, semantic HTML5, CSS and vanilla JavaScript — no build step or framework overhead. Fraunces and Manrope load from Google Fonts; Lenis and GSAP/ScrollTrigger load from a CDN, deferred.

Performance

Dedicated, separately art-directed desktop and mobile hero images served via a single <picture> element, all imagery compressed to WebP, and every script tag deferred.

SEO & sharing

A written meta description, Open Graph and Twitter Card tags, a JSON-LD Organization schema block, and a full favicon set (32px, Apple touch icon, 512px icon).

Accessibility

A skip-to-content link, aria-label and aria-expanded attributes on interactive controls, semantic landmarks throughout, and a prefers-reduced-motion fallback in both the CSS and the animation script.

Responsive design

Two purpose-built breakpoints (980px and 700px) reflow every section for tablet and phone rather than simply scaling the desktop layout down.

One channel. *Zero friction.*

Every path on the page leads to WhatsApp. A floating button stays available from the first scroll, and the structured enquiry form — name, organisation, phone, property type and an optional note — opens as a pre-filled WhatsApp message rather than a silent database submission, so every lead is immediately visible and actionable.

WORTH FLAGGING

No analytics or ad pixel is wired in yet, so enquiry volume can't be measured centrally — see recommendations.

Built to plan. *Then built on further.*

All eight sections from the approved project plan shipped as scoped, in the same order and to the same brief. Two further sections were added during production – an active-spaces showcase and a procurement-style FAQ – without extending the original two-week delivery window.

8

Sections in the original approved plan

10

Sections delivered, in the same window

+2

Added: active spaces & FAQ

ADDED BEYOND THE PLAN

Active spaces

Names the building types Nafaka already serves, widening the page's credibility beyond office buildings alone.

FAQ

Answers the procurement objections a facility or finance team raises before sign-off, ahead of the enquiry rather than after it.

Live-ready today. *Stronger with these next.*

01 Analytics & attribution

Add GA4 or a Meta Pixel so enquiry volume and traffic sources can be measured centrally, not just read from WhatsApp.

02 Custom domain & hosting

Connect the production domain and confirm a hosting target for launch, per the handover notes overleaf.

03 A privacy note on the form

One short line on how enquiry details are used — worth adding given the form collects name, phone and organisation.

04 Testimonials or case studies

An early client quote or logo strip would reinforce the heritage section's credibility claims with evidence.

05 An email fallback

A mailto alternative alongside WhatsApp, for desktop reviewers without WhatsApp Web configured.

06 Post-launch monitoring

A simple uptime and performance check once the final domain goes live.

Everything needed *to take it live.*

FILE MANIFEST

index.html	Page markup, metadata and structured data
styles.css	Full visual design system and responsive layout
script.js	Navigation, the lead form, and the motion enhancement layer
assets/	Logo, favicon set and desktop/mobile imagery (WebP)

GOING LIVE

Open index.html in a modern browser to preview the site locally. To publish, upload the full contents of the website folder to the public root of any standard static host, then connect the final client domain.
